Dentistry Newsletter Nov 22 VOL.2

Dontia Alliance at IDEM 2022

the leading Dental Exhibition and Conference in Asia-Pacific

Our Dontia Alliance team had an immensely fruitful weekend at the recent **International Dental Exhibition and Meeting (IDEM)**, the leading dental exhibition and conference in the Asia-Pacific!

With our global partners all converging in Singapore for the weekend, we had the unique opportunity to bring together leading industry partners for our **Dontia International Partner Networking event**, while building new bridges with prospective collaborators, and strengthening existing bonds with friends and contacts across the region. We were even able to formalise key partnerships to drive and support new initiatives which we will announce in our upcoming newsletters!

This was the 12th edition of IDEM, held from 7-9 Oct 2022, and the first physical exhibition after the pandemic, featuring over 500 exhibitors and bringing together over 6,000 attendees from all over the world. Heartiest congratulations to organisers Koelnmesse and the Singapore Dental Association (SDA) for a greatly successful event, and we certainly look forward to participating and forging new partnerships at the next meeting in 2024!

Dontia Alliance team with **PLANMECA**

IDEM 2022

We had a great time at IDEM 2022! Glad to meet familiar faces, strengthen partnerships and forge new bonds.

Thank you to all our friends for the continual support!

See you at the next IDEM!

BRIDGING EXCELLENCE

INTERNATIONAL NETWORKING DINNER

Dontia Alliance hosted our very first International Networking Dinner on 6 Oct 2022, and had the great pleasure of bringing together esteemed global brands during the IDEM 2022 weekend.

cheers!

We had the privilege of having **Christian Stempf**, Hygiene Advisor at W&H, to share his personal experiences and valuable insights on reprocessing medical devices. We took the opportunity to have a chat with him!

You have been involved in infection prevention for 30 years! How did you get started in the industry?

Oh, this is a long story. I oversaw after sales service in a previous medical company (blood analysis). I wanted to move to the dental field and be more active on the education side of the business.

I quickly noticed there was a lack of knowledge in infection prevention and sterilization. I jumped on these topics and after 30 years, I'm still excited to share my experience and... educate.

How has the industry changed over the last 30 years?

It has changed tremendously. Many procedures of the reprocessing circle have been automatized to make it safer for the users and are more efficient than manual processes.

Another good example is the area of sterilization which has improved tremendously over the last 20 years, changing from "steam cookers" to devices providing hospital grade sterilization cycles.

CHRISTIAN STEMPEF

Christian Stempf has worked extensively within the European dental industry in infection prevention for 30 years, with focus on reprocessing reusable medical devices, in particular sterilization and design of reprocessing areas.

Christian offers vendor independent lectures for healthcare professionals as well as comprehensive courses for dental assistants worldwide.

The Challenge of Reprocessing Medical Devices - Get it Right!
25 Oct 22 Guest Talk in collaboration with

Share with us a day in your life as a hygiene advisor for W&H Group!

Every day is different especially as I travel a lot around the world. It is a privilege to be able to meet different people and cultures. I have exchange with healthcare specialists, present to dental assistants and/or dentists and educate our representatives.

When I'm at the office, I typically work on enhancing my presentations for my trips and adapting the content to the respective local guidelines.

The topic of your lecture was *"The Challenges of Reprocessing Medical Devices. Get it Right!"* Why do you think that this topic is important for every dental professional?

Dental professionals have the legal duty to provide safe treatments and prevent any infection to patients, staffs and themselves. 😊

I wish they will no longer see reprocessing as a huge cost, but instead turn it to an added value and benefit to their surgery. They should be proud of their reprocessing area and share it with their patients.

Recent Education and Training Sessions

Special thanks to all our speakers, partners and attendees for your support for our recent sessions. Do check out our Facebook and Instagram pages for photos and insights from the event!

TREATING WORN DENTITION

The lecture by Dr Wong Keng Mun on Treating Worn Dentition was well presented, beautifully illustrated and filled with helpful information on the diagnosis and treatment of worn dentition.

I attended a few of Dr Wong's lecture, and he has always been able to engage the audience with his well delivered lectures. I look forward to more of his lectures, as he is always very willing to share his experiences.

SOFT TISSUE MANAGEMENT IN RESTORATIVE DENTISTRY

I always look forward to listening to Dr. Wong Keng Mun. He has a clear, unassuming style that can make difficult subjects easy to understand. And, you can be assured of excellent photographs.

Thank you for the amazing lecture series, have definitely enjoyed it and learnt a lot. (:

ORAL APPLIANCES

Was an interesting topic that I am not very familiar with.

Enjoyed Dr Wong Keng Mun's very informative lecture! Truly learnt alot.

MAXIMIZE YOUR TIME DURING ASSOCIATESHIP & BE ON YOUR WAY TO STARTING YOUR OWN PRACTICE

It was an incredibly amazing session by Dontia Alliance - We had a thorough breakdown on what it is like being an associate vs being a practice owner. I will definitely recommend whoever is keen to gain a deeper understanding on this topic.

Great and candid session to learn more about benefits and challenges of ownership vs being an associate.
